## CERTIFICATES

### Backend Development — Nithub

AUGUST 2023

Certified in backend development with a focus on SQL and JavaScript, having completed a rigorous six-month program. Proficient in server-side integration, database administration and design, and API development.

### Backend Development — DevCareer

APRIL 2024

Certified in backend development with a focus on NoSQL and JavaScript, and also having been taught HTML, CSS AND Client-side JavaScript. I completed a rigorous four-month program. Proficient in server-side integration, database administration, and API development.

### Backend Development — Africa Agility Foundation

JULY 2024

Certified in backend development focused on MongoDB and NodeJS, with additional expertise in EJS and GraphQL, after a rigorous four-month program. Experienced in collaborating with frontend developers, UI/UX designers, data scientists, AI developers, product managers, Scrum Masters, and marketers.

## EDUCATION

### Miva Open University — BSc. Software Engineering

JANUARY2024 - PRESENT

## PROJECTS

### Bank API — <https://github.com/Hephzy-1/Bank>

I developed an API which performs banking operations and it caters to two roles- users and admins. They can perform tasks such as withdrawing from accounts, making deposits, transfers and even bill payments. Furthermore, admins can freeze an account and also close an account. All users have to register before they are able to create an account. The API is secure and implements technologies such as MySQL, NodeJS, ExpressJS, and Bcryptjs among others.

## SKILLS

Based on my experience, I have developed a strong understanding of Server-side JavaScript, NodeJS, NoSQL, and SQL. I have also gained some knowledge in HTML and CSS for web development, along with client-side JavaScript for creating dynamic and interactive web pages. Additionally, I have worked with Typescript while building a NodeJS application.
